Program in Public Health Presents*

Eileen Crimmins

AARP Professor of Gerontology, USC
President-Elect, Population Association of America

TRENDS IN MORTALITY, DISEASE, AND PHYSIOLOGICAL STATUS IN THE OLDER U.S. POPULATION

The U.S. continues to fall behind other countries in life expectancy. One reason is growing mortality in midlife from so-called deaths of despair. Inequality in life expectancy has grown for some socioeconomic and geographic groupings but diminished by race and gender. Public health programs cannot eliminate adverse trends without policies supporting economic opportunity for families.
