

The Center for Demographic & Social Analysis presents

Candice Odgers

Professor of Psychological Science, UC Irvine

GROWING UP IN AN INCREASINGLY UNEQUAL AND DIGITAL AGE

Over the next decade, the largest generation of adolescents in human history will come of age. This generation differs from prior ones due to the rapidly changing digital and social landscape. Odgers presents new findings from a contemporary cohort of over 2000 adolescents, linking census tract, cellphone, and genetic data to illustrate how structural disadvantages and inequalities are mirrored in the online world, while also offering new tools to close the "opportunity gap".
